## Value proposition for formulators...

SYNATIVE® LE 6000 is a new high performance lubricity enhancer complementing the conventional block co-polymer range for use in fully and semi-synthetic MWF formulations.

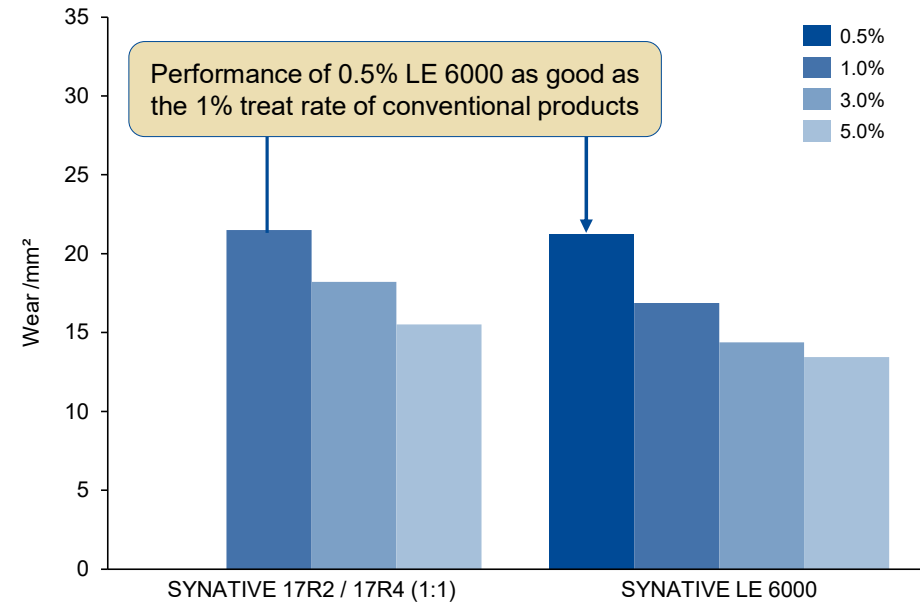

## Performance features

- Superior performance compared to block co-polymers
- High efficiency at low treat rate
- Efficient reduction of torque
- Low wear scar and noise
- Very low foaming
- Excellent wetting due to low surface tension
- High separation power for improved cleanliness
- Broad registration
- No labeling

## Reichert test results in MWF\*

\* Formulation contains lubricity enhancer, 7% mono ethanol amine, 4% caprylic acid, balanced w/ water
